EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows: the title of the invention was change to

--An Ion Measuring Composite Electrode--.

2. The following is an examiner's statement of reasons for allowance: This examiner is withdrawing all the outstanding rejections of the claimed subject matter. The rejections in question relied on a combination of applicant's admitted prior art and the teaching of Bukamier where Bukamier had been particularly relied on as a teaching of an elongated member with hydrophilicity or liquid absorption characteristics. However, one possessing ordinary skill in the art would not have been motivated to utilize the elongated member teaching of Bukamier for the electrode of the admitted prior art. In particular, Bukamier is utilizing its elongated member 24 between the inner and outer tubes to form a reference junction between the inner and outer tubes. See col. 5, ll. 13-26. By contrast, the admitted prior art has its junction 9 already located on the outer tube. See fig. 5A, 5B and paragraph 0006 of the specification. Because the junction of the admitted prior art is not located between the inner and outer tubes, there is no motivation to utilize the elongated member (i.e. the junction) of Bukamier between the tubes of the admitted prior art.
